Contact: (661) 802- 6330 | Lancaster, CA | maleahcast@gmail.com

Socials/Portfolio: [linkedin.com/in/maleah-smith/](https://www.linkedin.com/in/maleah-smith/) | github.com/castillios | maleahsmith.netlify.app

Computer science grad with experience building web applications, data pipelines, and AI-integrated workflows using tools such as Next.js and LLM APIs. Skilled at contributing effectively in collaborative, open-source environments.

PROJECTS

StudySpotter

Jan 2026 - Present

Software Engineer Volunteer | Remote | [Webapp](#)

Technologies: Next.js, TypeScript, Supabase (PostgreSQL), Google Places API, Apify, Gemini API

- Develop a Next.js web app with a PostgreSQL database, enabling users to discover study-friendly cafes across cities based on AI-labeled amenity data, reducing manual research from scattered reviews to a single searchable interface.
- Parse Google Maps URLs to retrieve structured location data via the Google Places API, scaling review collection from 5 to 50 reviews per place using Apify.
- Build a labeling workflow using Google's Gemini API to convert scraped review text into structured insights (WiFi quality, noise levels, seating) across 300+ cafes.
- Implement parallel processing to scale cafe data ingestion (1 → 8 cafes concurrently) and expand city-wide lookup to return up to 60 results per city.

KPFF Blueprints to Insights

Jan 2025 - Jun 2025

Student Frontend Developer | Irvine, CA | [Demo](#)

Technologies: React.js, FastAPI, OpenAI

- Collaborated on a full-stack tool that reduced manual specification review time, allowing engineers to review batches of up to 100 sheets in the time previously needed for a single sheet.
- Built React.js UI components enabling manual validation of AI-extracted blueprint data, improving quality control.

WORK EXPERIENCE

Hack for LA

Apr 2026 - Present

Software Developer Volunteer | Remote | [Website](#)

Technologies: GitHub, GraphQL API, GitHub Actions, Google Apps Script, JavaScript, HTML, Docker

- Contribute for the Hack for LA site across full stack and CI/CD workflows, such as resolving UI bugs, improving security on GitHub Actions, and reviewing PRs to maintain code quality in a collaborative open-source environment.
- Serve as a final quality control reviewer by verifying peer reviews, testing functional changes locally via the website's Docker Image, and confirm design system compliance.
- Migrate a Google Forms-to-GitHub Issues automation pipeline, from GitHub's deprecated REST API to the Projects v2 GraphQL API using Google Apps Script, to preserve uninterrupted issue tracking for project managers.

TECHNICAL SKILLS

Languages: Python, HTML, CSS, JavaScript, TypeScript, PostgreSQL, C++

Frameworks & Tools: Git, ReactJS, Next.js, Docker, Figma, Jira, Agile / Scrum, REST API, LLM APIs, Google Sheets

EDUCATION

University of California, Irvine

Graduated Sept 2025

B.S. in Computer Science, Minor in Digital Arts
